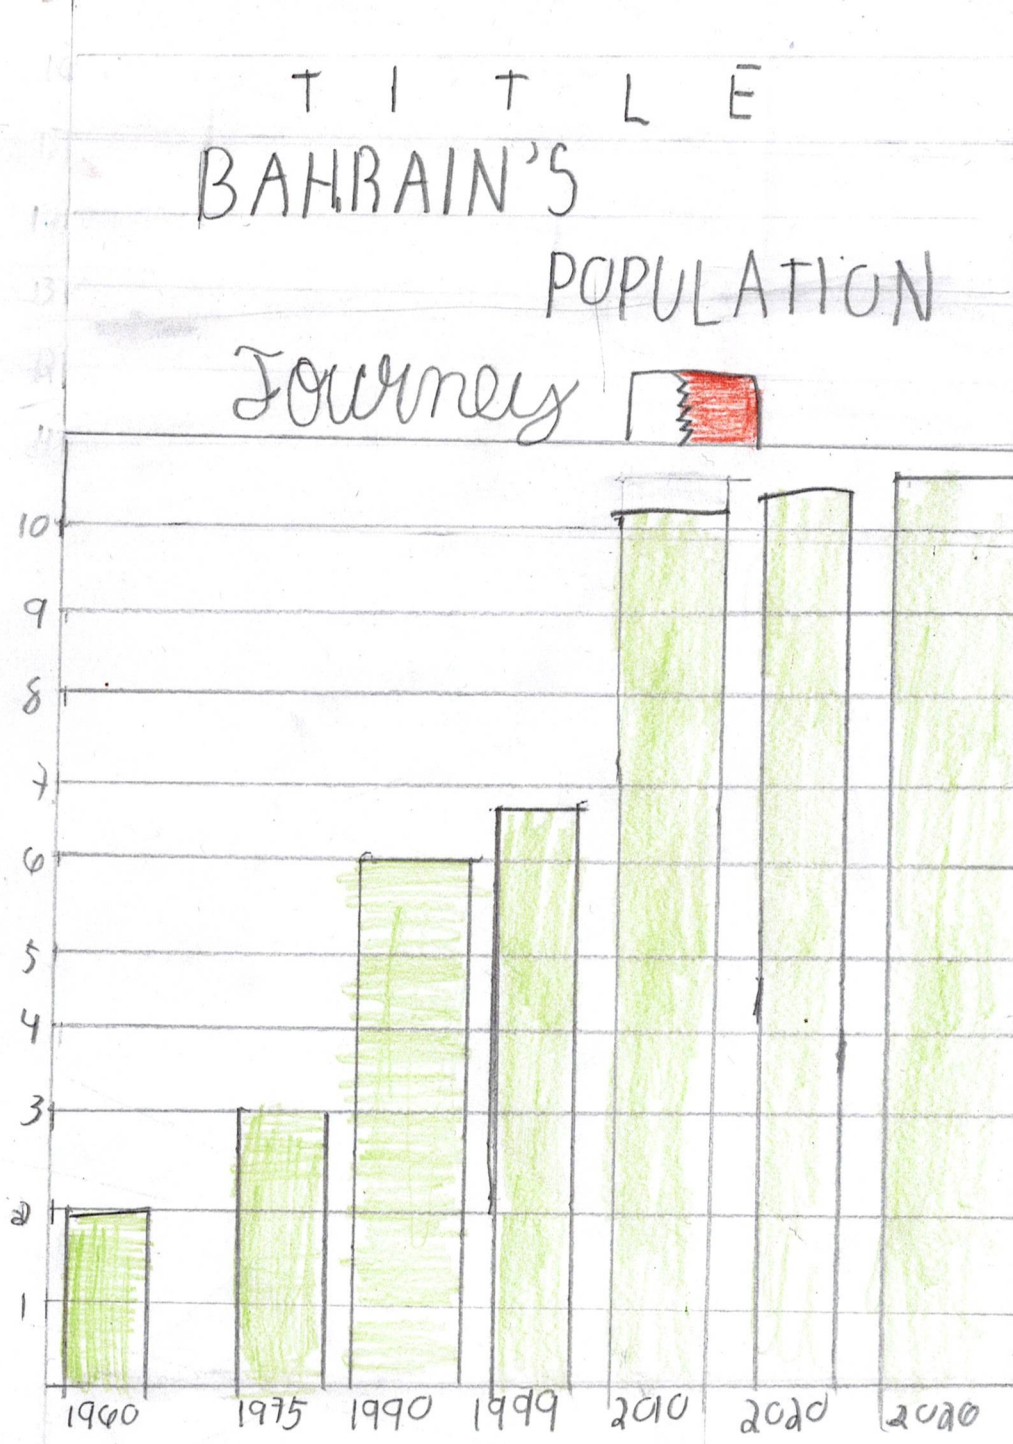
Bahrain's Population Journey

1. I made my bar graph by putting the years on the bottom and the population numbers on the side. I drew bars for each year, and the taller the bar, the bigger the population. This shows the changes overtime because the bar gets higher as the years increase.


2. I saw that Bahrain's population increased a lot from 1960-2026. this happened because of oil discovery, better jobs, and people moving to Bahrain from other countries. I learned that data helps us understand history because it shows patterns and explains how Bahrain grew overtime.
